

Data Team Scenario - Parent at Home Survey Data

Background: Every summer before trips start, HXP sends a survey to both builders and parents of builders (both those who are going on trips and those who aren't) to gather data and feedback about their pre-trip experience with HXP. The link below includes a partial copy of the relevant survey responses from parents. Make a copy of this document that you will use for your analysis.

Purpose: One of the biggest things keeping us from growth is finding enough quality Parent Builders. The team has tried multiple different ways to recruit Parent Builders, but it's still a struggle. The Builder Experience and Parent Builder teams are hoping to utilize the data from the survey responses to better understand the reasons why parents decide to be parent builders, as well as to better anticipate and resolve the questions and concerns that keep parents from going on trips with their kids.

Task: Analyze the survey response data from the link above. Organize it into a dashboard that managers can use to understand important numbers and trends at a glance. Write 1-2 paragraphs summarizing the process you used to analyze the data. Include your copy of the spreadsheet with your dashboard in your submission.

After analyzing the data, write 1-2 paragraphs summarizing your findings and making recommendations as to how the Parent Builder team can help more parents decide to go on trips with their kids.
